Trecepta®RIB Complete®

Showcases the exciting Trecepta® technology in high-caliber genetics bringing improved control of Western Bean Cutworm and Corn Earworm. The large, girthy ear flowers late for the maturity and dries down fast bearing exceptional yields of grain on the cob. A softer kernel texture of the grain paired with the exceptional tonnage of the robust plant produces a lot of highquality feed. Outstanding husk coverage helps ward off bird damage and protect the grain. Massive ears have a lot of flex and adapt to lower plant populations to maintain high yield. Only available in a Trecepta® RIB Complete® technology trait package without Corn Rootworm protection.
