DuracadeViptera™

Top-shelf silage play in the north with a state-of-the-art insect control trait package that provides both above and below-ground insect protection. Viptera® technology also protects against Western Bean Cutworm and Corn Earworm damage to maintain yield and quality. The tall plant has a more upright leaf habit to improve sunlight interception at denser plant populations and increase tonnage. Push this one on the high-yield acre for maximum production potential. Avoid planting where Gray Leaf Spot is expected to have an economic impact in the south.
