VT4PRO™ RIB Complete®

Showcasing the VT4PRO™ trait package in 99 RM genetics that combines the proven above ground insect protection of Trecepta® plus below ground insect protection using RNAi technology. An attractive package in the field with a good-sized plant plus longer, semi-flex ears with good girth and superior plant intactness late into the season. Superb yielder of both grain and silage with superior Anthracnose Stalk Rot ratings to ensure standability for harvest plus good ratings for Tar Spot. Adapted to all yield conditions, but shines on the more moderate yield acre in zone with good stress tolerance. Recommended for acres with low to moderate Corn Rootworm pressure and at higher risk for Western Bean Cutworm or Corn Earworm damage.
