NEW FOR 2027!

Xtendflex® Soybeans

Backed by multi-year data, this variety delivers consistent high yields, with adaptability as one of its key strengths—making it a strong fit across a wide range of acres. It branches well to effectively fill wide rows, while still performing reliably in narrow-row systems. A strong agronomic package includes excellent resistance to Sudden Death Syndrome and Frogeye Leaf Spot. Good standability and strong pod shatter tolerance help protect yield through the end of the season, ensuring performance holds when it matters most. With STS® tolerance, it is an excellent double-crop option following wheat, adding flexibility to your planting system.
